Subject: Ban Fracking Off California's Coast
Date: Friday, March 04, 2016 5:15:03 PM

Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish,

I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean.

As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed.

The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown."

Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments.

Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all.

Sincerely,

But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Carol Adams
ADAMS	SPENCER	CA	90034	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, SPENCER ADAMS

Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Tamadhur Al-Aqeel
Alabiso	Marie	MA	2360	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Marie Alabiso

Alfred	John	CA	92504	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. Personally, I'm a surfer and one who loves the ocean. I remember the years of tar balls on the beaches of Santa Barbara County and can't believe we're letting oil companies take us down the road to that potential again. My wife grew up visiting her Grandmother in Santa Barbara and also recalls the devastation off-shore drilling had on their enjoyment of the ocean and the amazing beauty of the California coast. As a lifelong Californian, I urge you to let us go backwards. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, John Alfred

As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Wade Alger
Alkhalesi	Yasin	CA	90048	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Stephen Amy
An	Rose	CA	91006	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Sherri Andrade
Andre	Javier	CA	91801	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Robert Applebaum
Applebaum	Karen	CA	94605	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Ashford	Helen	CA	93705	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Helen Ashford
Ashley	Kate	CA	94061	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. Averett	A.J.	CA	91942	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, It is long past time to PROHIBIT oil companies from fracking off California's coast. Learning the details of your agency's cursory draft analysis of offshore fracking nearly made me throw up. Are you people galactically ignorant, perverse or have you simply been bought off (none of which are mutually exclusive)? Fracking is an horrendously polluting and dangerous practice, one that has absolutely no place in our ocean. Period and full stop. As you must know, offshore fracking dramatically increases the risk of earthquakes (just ask residents of Oklahoma and Texas), not to mention oil spills; the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems; prohibit it once and for all. Very truly yours, A.J. Averett
Averill	Sofia	CA	93546	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. I have listened to industry advocates promoting fracking say "IF it's done correctly" they see no harm done. BUT I don't want to wait for the consequences for the times it IS NOT done right. Look at the devastation in the Gulf states after the BP disaster. It is still struggling to recover. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Phyllis Axt

Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jeanette Ayala-Rios
Aylward	David	CA	94061	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, David Aylward
Ayvazyan	Artak	CA	91205	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Michaela Baker
Baker	Martena	VA	22939	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Martena Baker
Baker	Kelsey	CA	94122	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Baldwin	Valerie	CA	94028	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, Please prohibit oil companies from fracking off California's coast. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean or anywhere else for that matter. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. I love wildlife and become distraught when humans kill. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." We do not want those dangerous chemicals released into the ocean. The ocean is getting more acidic, cluttered with plastic and other human garbage. So please prohibit offshore fracking. Enough is enough. Sincerely, Valerie Baldwin
Baldwin	Leland	CA	90650	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. Those oil platforms are not even supposed to be there! As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, carol banever
Banever	Robert	CA	91010	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Joanne Barnes
Barnes	William	TX	78759	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, William Barnes
Barnett	Gary	CA	92371	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Barnum	Terry	CA	92056	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. If what I read about your agency's cursory draft analysis of offshore fracking is true, I will be incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Finally, we aren't allowed to know about some chemical because the frackers have been able to classify these ingredients as trade secrets. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Terry Barnum

More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Steven Barry
Barry	Ruachelle	CA	92110	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Donald Baumgartner
baxel	g	CA	92234	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jaime Becker
Beckers	Jeffrey	CA	94602	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Annie Belt
Beltz	Jaime	CA	95928	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. Bender	Kae	CA	93536	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, Fracking is bad for the water and the air and the entire planet. It is not the stopgap measure it's purported to be but a devastating pollution of our Earth. We need to invest in sustainable, renewable green energy technologies NOW and get off the fossils. Undertaking new fracking in the ocean off CA is reckless endangerment for the world and should be rejected. We saw the problems of Methane storage at Porter Ranch, and the creation of new methane releases is irresponsible. I urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Rex Benning
Bennion	Beth	CA	95519	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Beth Bennion
Benson	Sheila	CA	93653	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Charlie Bergstedt
Berk	Deborah	CA	94931	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Deborah Berk
Berk	Scott	CA	90292	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Berke	Allison	CA	94303	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As a post-doctoral scientist, I often feel that business interests are allowed to trump environmental and scientific concerns again and again--need scientists become lobbyists in order for the government to take seriously what we report? No amount of money promised by the fracking industry can buy back or repair our coasts. The potential cost is too great for any short-term gain. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Lisa Bethune
Bettenhausen	Elizabeth	CA	93428	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Other than continuation of your own jobs and perhaps bowing to the fossil fuel industry which may be who you really work for, I cannot understand why you would think this is a good idea. Fossil fuels are killing the planet. There are viable alternatives. Do you want to look people in the face in the future and say, "Yes, I help pollute and kill the planet?" No more fossil fuel projects. None. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Robert Biehl

Bingham	Dana	CA	92308	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Dana Bingham
biotech	Katherine S Stewart, MA Biology, former USFS	CA	92111	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Blake	Dale	FL	33611	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Dale Blake

Boccalon	Jana	CA	95831	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jana Boccalon
Boddorff	Jessica	CA	94140	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Christopher Boone

Boone	Joseph	CA	93401	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, Stop destroying the Earth. I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Joseph Boone
Boor	Carolyn	CA	91730	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Marie Boulet

Bourquin	Doug W.	CA	94804	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Doug W. Bourquin

Bracamonte	Lydia G Sanchez	CA	93561	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. We all are well aware that fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Lydia G Sanchez Bracamonte

Brace	Kimberly	FL	33782	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Kimberly Brace
Brachel	Tiana	GA	30121	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Larry Branson

brant	Karen	CA	94117	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Marilyn Briones

brockman	jane	CA	90232	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, Haven't we learned anything from the BP Horizon? Right now 60% of wells in the Gulf of Mexico are leaking. If the industry had to pay for the damage they do, there would be no profit in fracking at any price. Don't let them destroy our ocean and sea life. Please prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. Sincerely, jane brockman

Broide	Barbara	CA	90025	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. This practice is a dangerous way of coaxing oil from beneath the ocean and presents tremendous risks not only to our ocean ecosystems, but to the many interests that rely on the ocean for their livelihoods. This includes those who fish the seas and the extensive tourism industry. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was greatly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean interfacing with fragile ecosystems already under assault by urban runoff/pollution and other impacts of man's activities on our planet. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Donna Brown

Brown	Vera	CA	94065	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Vera Brown

More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Deborah Brusco

Brusven	Carol Ann	CA	94041	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Carol Ann Brusven

Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Brian Bullard

Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Wendy Burks
Burks	Paul	CA	94903	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Paul Burks

But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, John Butterworth
Buzon	Sylvie de	CA	90066	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Sylvie de Buzon

Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, arlene caliendo
Callen	Rosalie	CA	93108	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Rosalie Callen

Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, celeste capasso
Capasso	Celeste	ot	70010	IT	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Celeste Capasso

Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Paul Carlton
Carmi	Ore	CA	94702	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ore Carmi

Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Carl Cartwright
Caruso	Dillon	CA	95928	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Dillon Caruso

Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Michael Cavanaugh
Cavanaugh	sheri	CA	92651	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, sheri Cavanaugh

The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Geeta Chankasingh
Chankasingh	Geeta	NY	10467	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Shoma Chatterjee
Chaves	Bonita	CA	95531	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, mary chieffe
Chilcoat	Mike & Carol	CA	92315	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, sandra chu
Chynoweth	Iris	CA	95345	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Claman	Elizabeth	CA	94801	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to strongly urge you to prohibit any and all oil companies from fracking off any section of California's coast. When I heard the news about your agency's inadequate draft analysis of offshore fracking, I was both angry and deeply disappointed. Fracking is a filthy, polluting and dangerous practice that has absolutely no place in our ocean, especially given the science that shows that offshore fracking increases the risk of earthquakes and oil spills. The Refugio spill last year showed us how much damage oil can do to our beaches, marine habitats and coastline. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Elizabeth Claman

Clover	Frederick	CA	90815	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Frederick Cliver
Clough	Jim	CA	91204	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Tina Colafranceschi
Colaizzo	Jorge	CA	94803	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jorge Colaizzo
Colden	Bradley	CA	90602	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Deb Conant
Condelli	Anthony	CA	93433	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Anthony Condelli
Conelley	B.	MD	21701	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Anita Coolidge
Coolidge	Anita	CA	92007	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Anita Coolidge
Cools	Cecilia	CA	91423	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Bibire Marius Cosmin
Cosmin	Bibire Marius	ot	805300	RO	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Bibire Marius Cosmin
Cossettini	Lisa	CA	90293	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Sandi Covell
Covey	Susan	CA	94306	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Susan Covey
Cowen	Neal	CA	93003	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Michelle Cristantiello
Crittenton	Cynthia	CA	91320	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Cynthia Crittenton
Crivinar	Robert	CA	94131	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Lydia Cummings
Cunha	Teresa	CA	94583	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Teresa Cunha
cunniff	thomas	CA	94708	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, T D
D	Dr. John D. Stickle,	CA	95425	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to Strongly urge you to Absolutely prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed and deeply angered. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean, which is already suffering the consequences of the oil and gas industry, as well as the abuses of factory ship fishing which is decimating both animals and fishes. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year, Once Again, showed us just how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. How can you even consider allowing Offshore Fracking to be done again? Do you not like these fish and animals or the oceans or their relationship to our overall climate and ability to live on this planet? The fracking chemicals oil companies would resume dumping into our ocean also Again pose a Huge and Tremendous danger. Studies show that many (actually Most) fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." But, added all together and allowing these fracking chemicals, identified by scientists as among the most toxic to aquatic life, to be dumped into the our ocean would simply be a death sentence for thousands of creatures, many of which are crucial to the overall ecosystem. Did you not see how far many were killed in just the Refugio "spill"? Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. Two wrongs do Not make a Right. This is a false equivalency, at best. But this just shows that fracking is far too risky no matter where it occurs, including in our very fragile and unpredictable marine environments. Do you believe in Science and what Scientists say? About 90% are on board that Fracking Anywhere is the worst choice that we can make. Offshore fracking is simply Way too big a gamble with our ocean's life-support systems and this same system is linked to our overall Earth life-support system. That's why I urge you to prohibit it once and for all. Thank you for your consideration of my comments and thoughts. Most Sincerely, Dr. John D. Stickle, D.C.

But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Laurie Dalke
Dallas	Polly	CA	94607	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Polly Dallas
Dallwitz	Alex von	CA	93923	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Ken Darling
Darling	Stephanie	CA	94133	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Stephanie Darling
darlington	kimble	CA	95567	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Davis	Christopher	CA	94038	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Basically, the concept of fracking in th ocean, then possibly allowing the chemicals to be dumped into the sea, is so stupid as to defy logic. Why is it that the oiol industry can cause such danger and damage to the environment, when any other entity trying to use the same types of chemicals in the environment is againstr the law. WAKE UP, FRACKING IS ENVIRONMENTALLY DAMAGING. DO NOT ALLOW IT TO SPREAD TO THE OCEANS!!! When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, CARLA DAVIS
Davis	Cheryl	CA	95673	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Yves Decargouet
DeCastro	Paola	CA	91206	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Mark Dempsey
Dempsey	Melissa	CA	91942	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Dewit	Jeroen	CA	90065	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jeroen Dewit
DeWitt	Judith	TN	37404	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Kevin Diggs
DiLallo	Jeffrey	CA	91942	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed. Fracking is a dirty, dangerous practice that has absolutely no place in our ocean. As you know offshore fracking increases the risk of earthquakes and oil spills, and the Refugio spill last year showed us how much damage oil can do to our coasts. More than 140,000 gallons of crude oil were dumped into the Pacific Ocean, and hundreds of birds, fish, sea lions and dolphins were killed. The fracking chemicals oil companies would resume dumping into our ocean also pose a tremendous danger. Studies show that many fracking chemicals are toxic to people and wildlife like fish and sea otters. Some chemicals are known carcinogens; others damage immune and nervous systems. And still others remain in the dubious category of "unknown." Yet you are proposing to allow offshore fracking because prohibiting it could lead to more fracking on land, which could increase air pollution and other harms. But this just shows that fracking is risky no matter where it occurs, including in fragile and unpredictable marine environments. Offshore fracking is simply too big a gamble with our ocean's life-support systems. That's why I urge you to prohibit it once and for all. Sincerely, Jeffrey DiLallo
Dillon	Bobbie	CA	95386	US	Dear BOEM Supervisor Rick Yarde and BSEE Chief David Fish, I am writing to urge you to prohibit oil companies from fracking off California's coast. When I heard the news about your agency's cursory draft analysis of offshore fracking, I was incredibly disappointed.
